

Types of Vaccines		
Age	Core	Non Core*
6-8 weeks	Distemper, Adenovirus, Parvovirus	
9-12 weeks	Distemper, Adenovirus, Parvovirus	Leptospirosis, Bordetella
13-16 weeks	Rabies, Distemper, Adenovirus, Parvovirus (NOT TO BE GIVEN AT THE SAME TIME)	Leptospirosis, Lyme
Adult boosters	While annual boosters are still sometimes given, many vets now recommend only re-vaccinating every three years	
<p>*Recommendation of non-core vaccines depends on your geographical location and your puppy's environment. Talk to your vet about your puppy's potential exposure. It is important multiple vaccines are not given at the same time. It means extra visits to your Vet, but the risk of overwhelming a pup's immune system by giving too many vaccines at one time is too high!</p>
